

1. A baby seat adapted to be worn at a midriff position of a person carrying said baby, said baby seat including a container having means for attaching said container to a belt of said person, said container receiving and holding a rigid container, said rigid container having an open interior, said open interior is covered by a seating plate, said seating plate is a seat for a baby sitting thereon, whereby the weight of the baby is carried by said container and thereby by said person at said midriff location.

2. The baby seat of claim 1, wherein said seating plate is stored in a pocket on said container when not in use.

3. The baby seat of claim 1, wherein said seating plate consists of three parts, a first part being a plate which is received in a vertical curved receptacle in a rear of said rigid container, a second part forming a seat for a baby to sit on and a third part is an upstanding plate limiting the extent of movement of a baby sitting on said seat.

4. The baby seat of claim 3, wherein all three parts are foldable relative to each other to form a single flat unit.

5. The baby seat of claim 1 including means for closing a top of said container.

6. The baby seat of claim 2 including means for closing said pocket.

7. The baby seat of claim 3 including means for limiting the rotational movement of said parts relative to each to a certain extent.
